

SB 1206 LAW IS HERE

Is Your California Business Ready For The Transition To Low-GWP Refrigerants?

What is the SB 1206 Law?

SB 1206 bans the sale of bulk HFCs with a global warming potential (GWP) over 2200 in California.

As of January 1, 2025, virgin high-GWP refrigerants like R404 and R507 are unavailable in California.

Rest assured—CoolSys is here to help you maintain compliance and keep your operations running smoothly. We offer a convenient SB 1206 action plan ready for deployment today.

1: INSPECT

CoolSys will complete a leak inspection to promptly identify and resolve any leaks.

CoolSys' Technicians follow the EPA and CARB strict leak detection, repair and reporting protocol to help you stay in compliance, maximize your system's performance while reducing GHG emissions.

CoolSys can install automatic leak detection systems, as needed.

CoolSys will provide the documentation to upload to the Refrigerant Management Program (RMP) portal.

2: TRANSITION

CoolSys will work with you to design a tailored path to converting to low-GWP refrigerants, which can include gas exchange, the use of banked or recycled refrigerants, or conversion to natural refrigerants such as CO₂.

3: MANAGE

Regardless of the path chosen, CoolSys technicians will support each conversion step, ensuring optimum refrigerant management, maximum system performance, reduced costs, and lowered emissions.

Using R404 or R507 or any of the refrigerants below?

Implement a strong leak detection and covert to low or ultra-low GWP refrigerant today!
